LAB NO 01

Operating System

Instructor: Ms. Muneeba Banaras

Submitted By: Wasif Ali

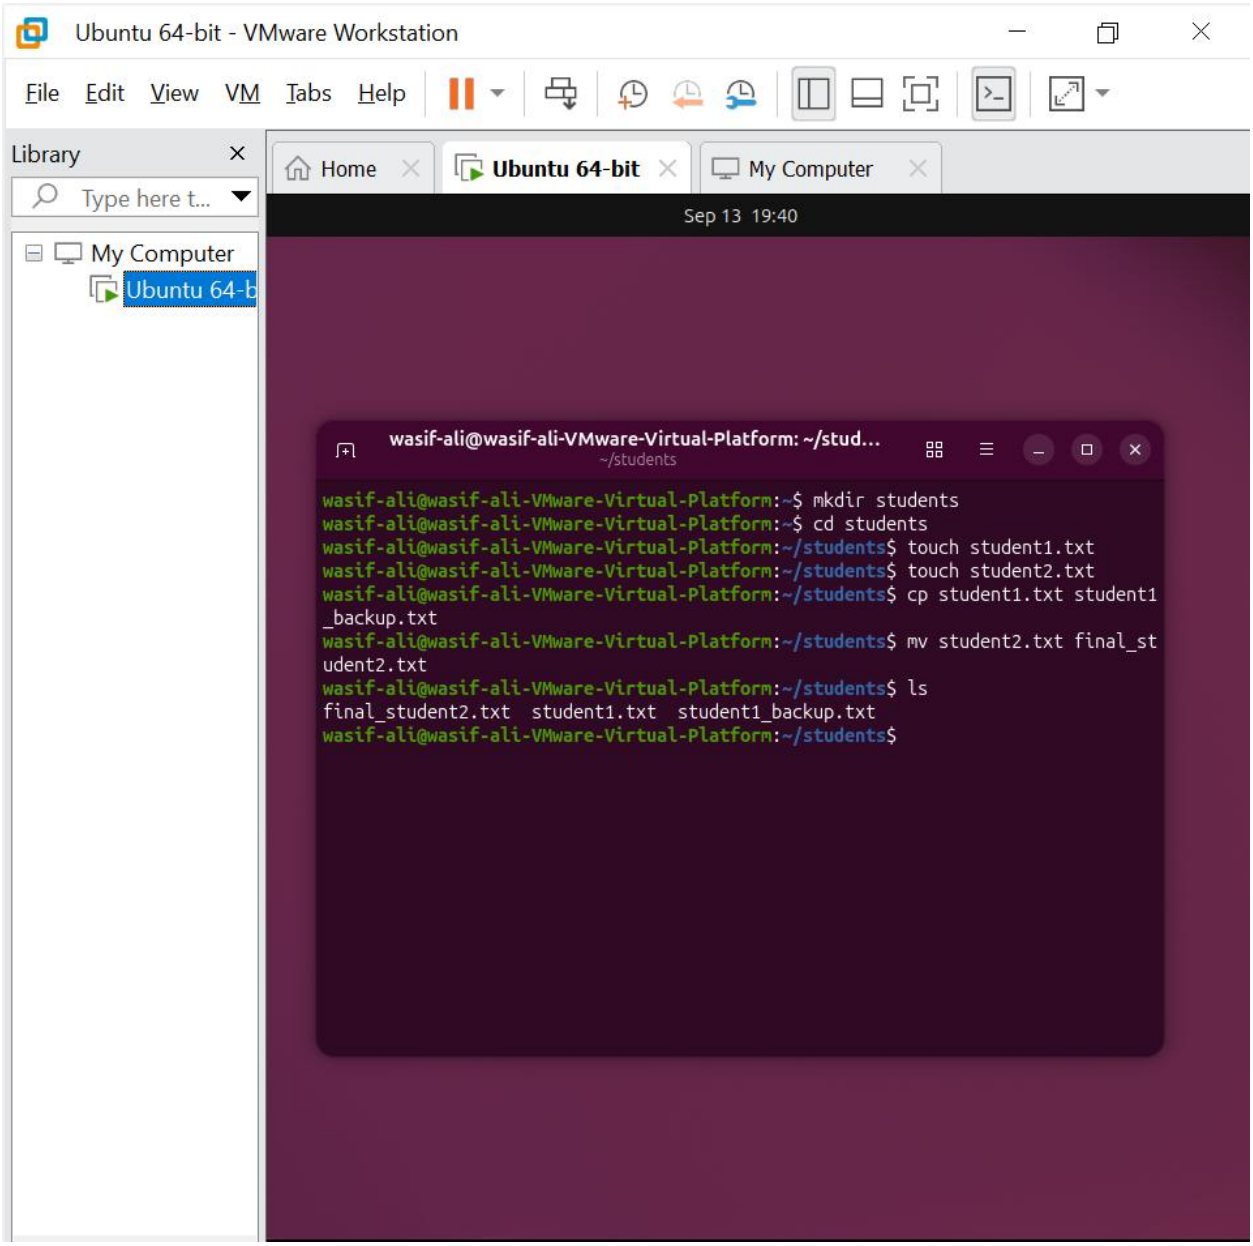

Reg ID: 245187

Class: BSCS F'24 B

LAB TASK

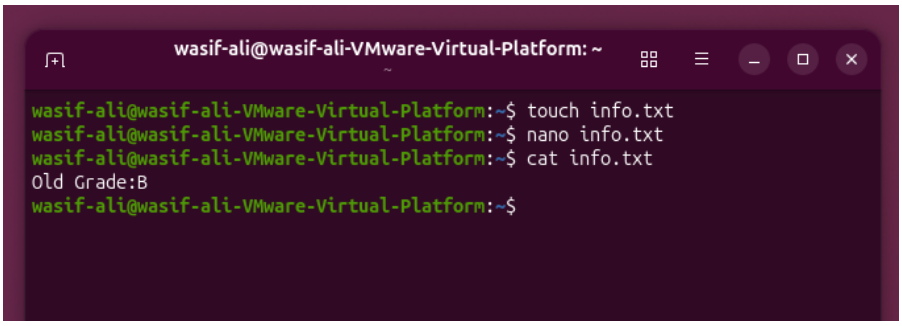

Q1

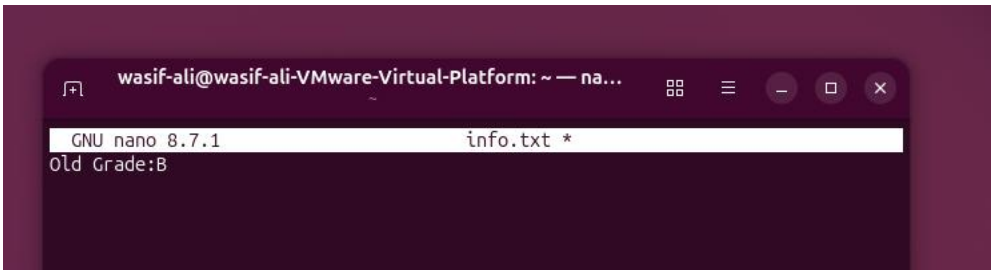

Solve a Linux file-management problem in which student records are stored in different files. Use suitable Linux commands to organize, copy, rename, and manage the files.

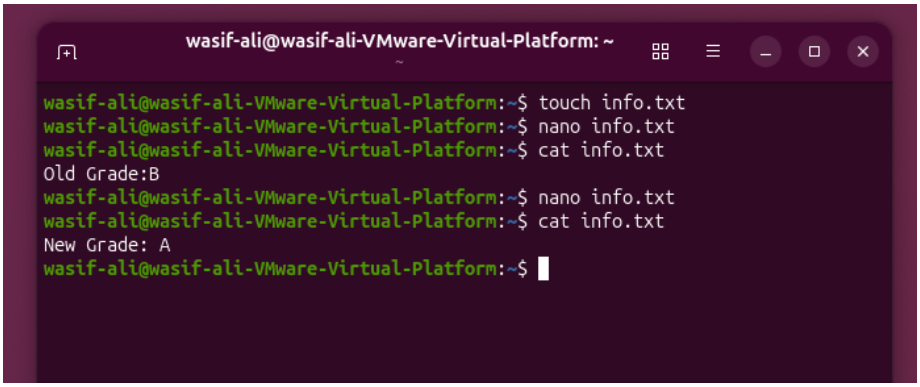

Q2

Change the information stored in a text file and Complete the required file operations. Relate the changes in the file with the final output displayed on the terminal.

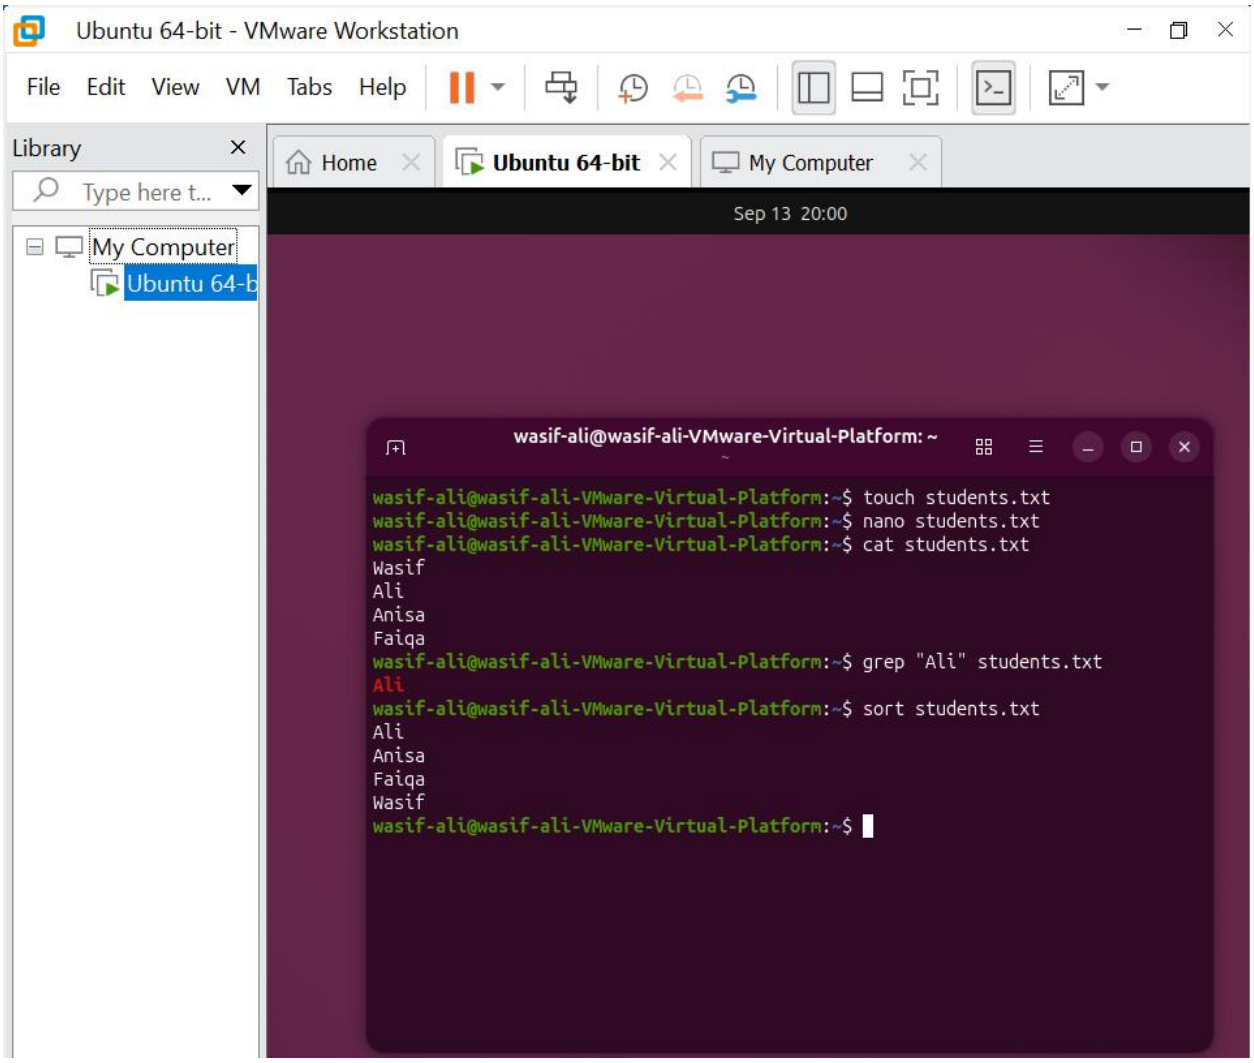

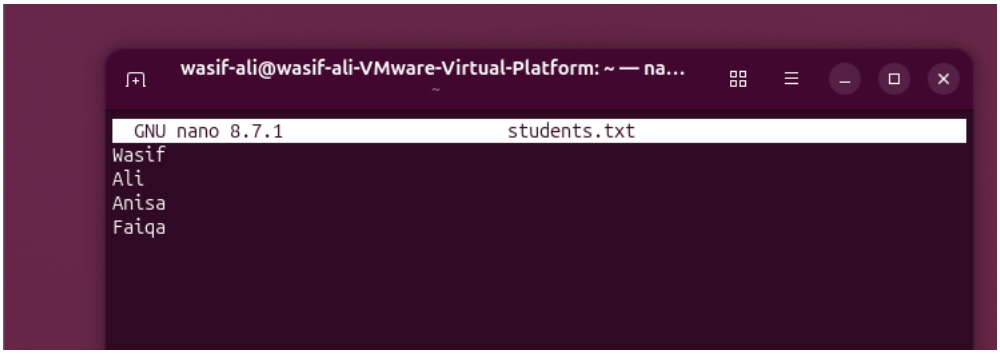

Q3

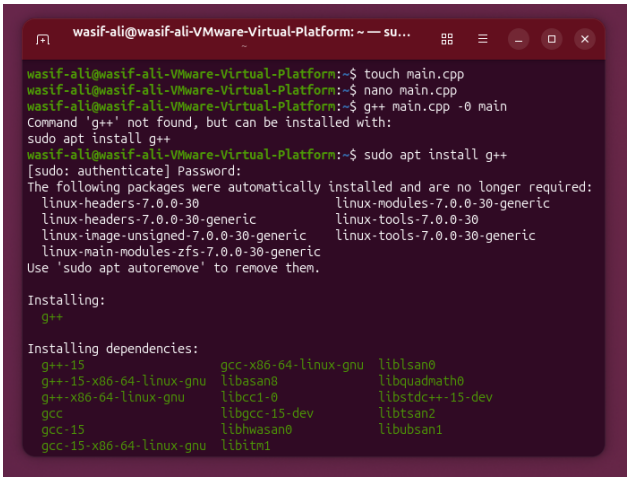

Discover specific student information from a text file and Use suitable Linux commands to arrange, search, and display the required records. Articulate the difference between the obtained outputs.

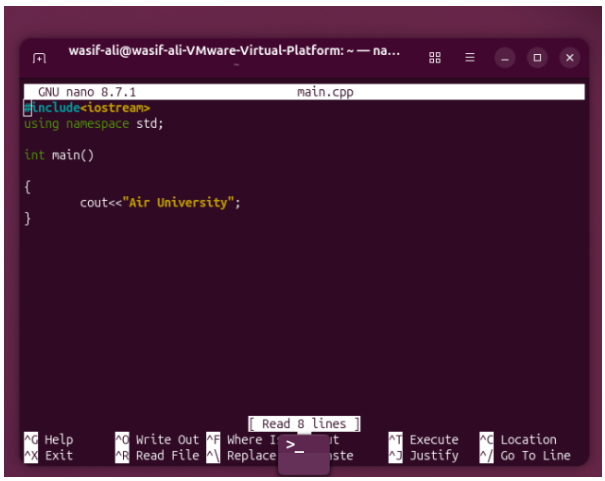

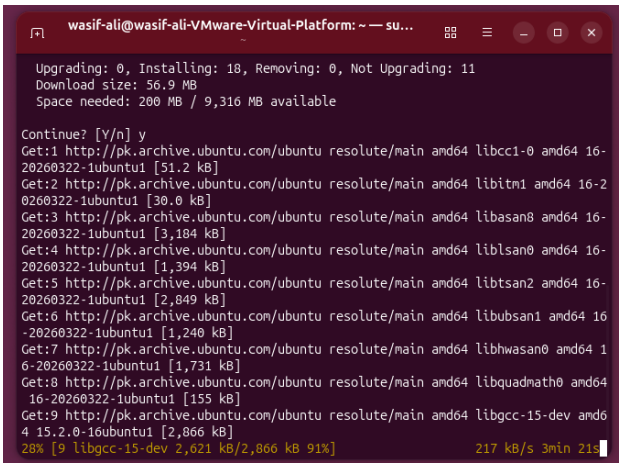

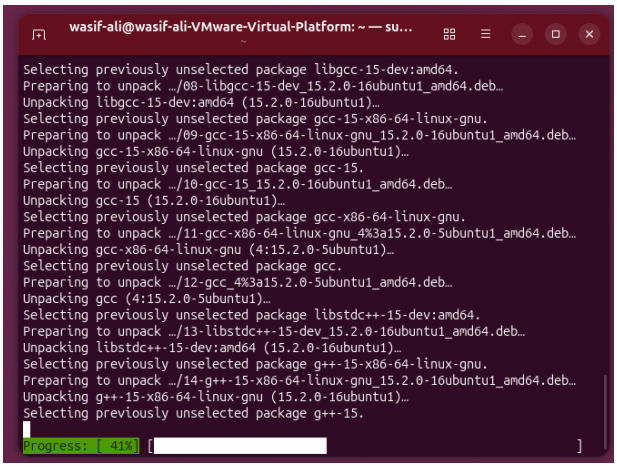

Q4

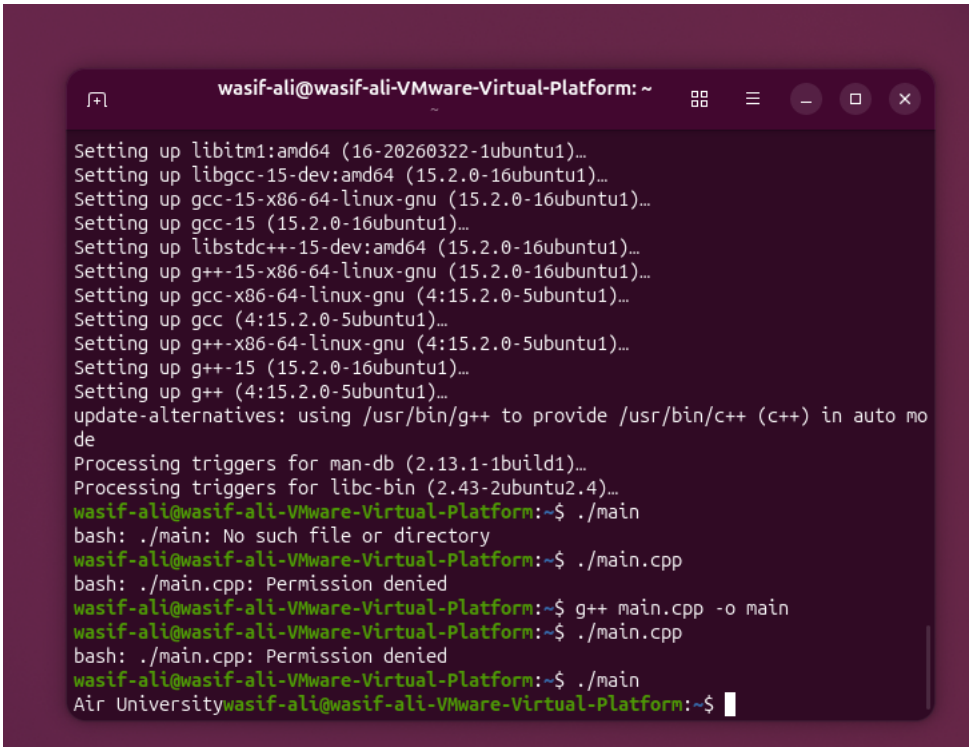

Transfer your knowledge of Linux commands to a C++ compilation task. Solve the problem by creating and executing a C++ source file, and Teach another student how the source file is converted into an executable program.
