LAB NO 06

Operating System Lab

Instructor: Ms. Muneeba Banaras

Submitted By: Wasif Ali

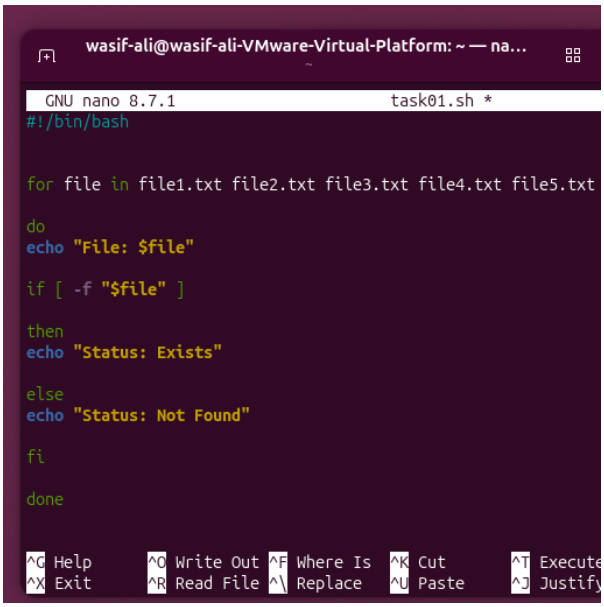

Reg ID: 245187

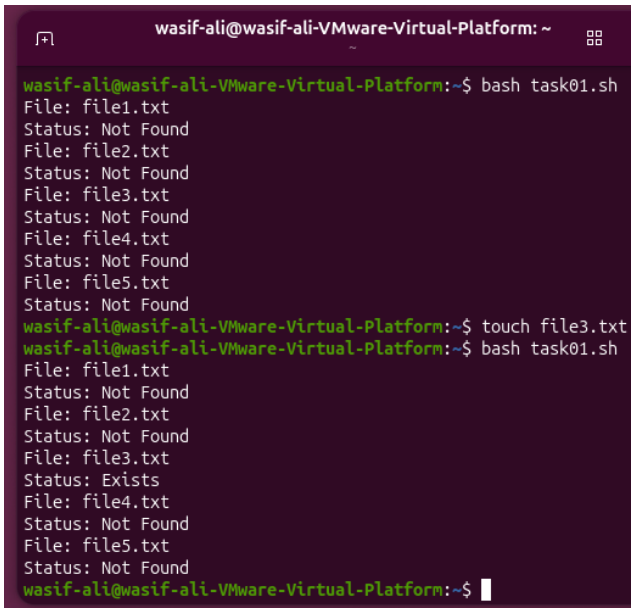

Class: BSCS F'24 B

LAB TASK

1. Demonstrate the use of a for loop by displaying the names of five files and checking whether each file exists in the current directory.

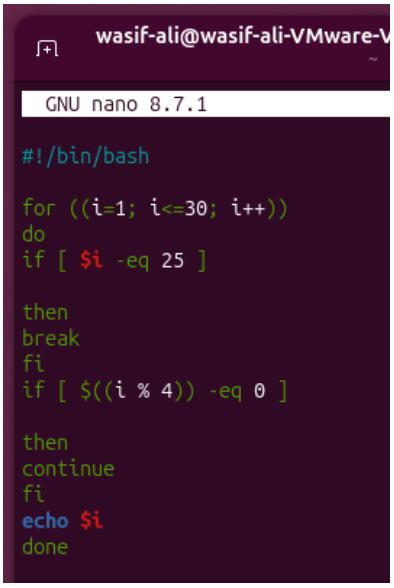

Code/Commands:

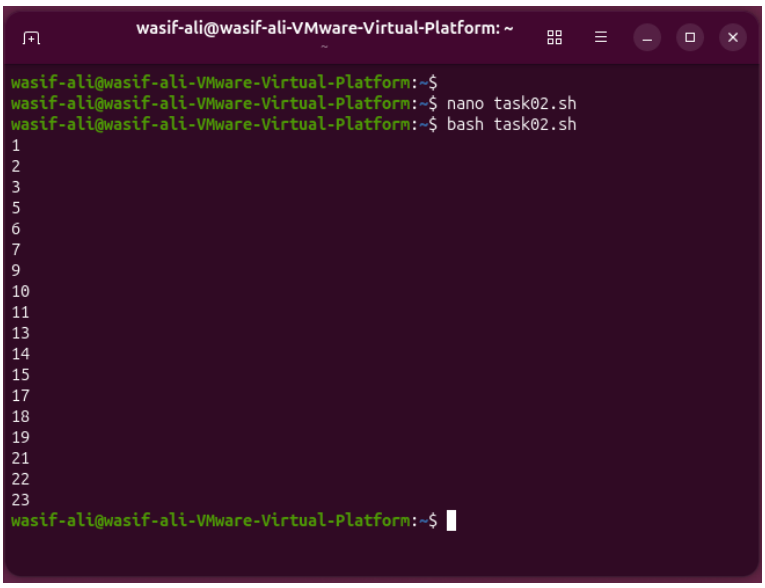

2. Use a for loop to display numbers from 1 to 30, skip numbers divisible by 4 using continue, and stop the loop when the number reaches 25 using break.

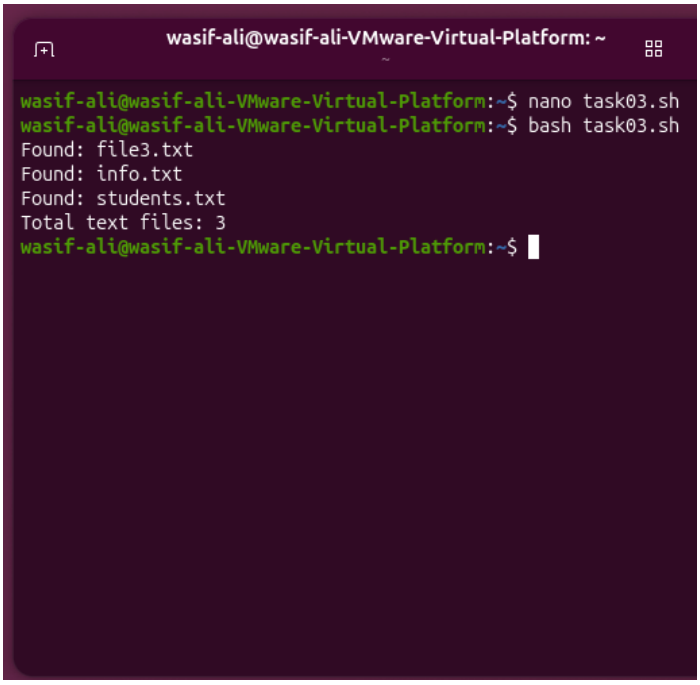

Code/Commands:

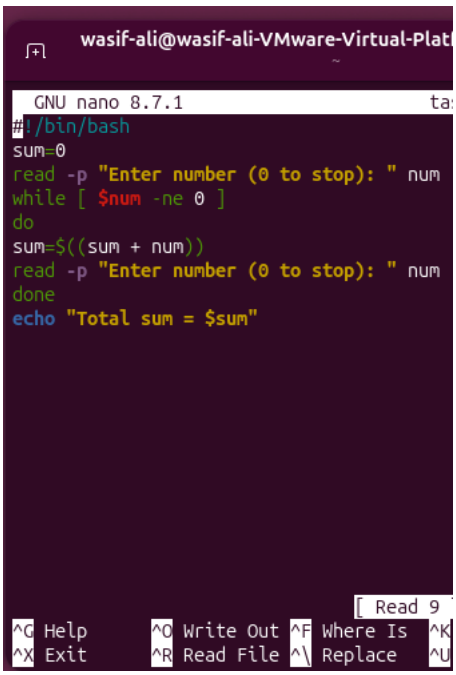

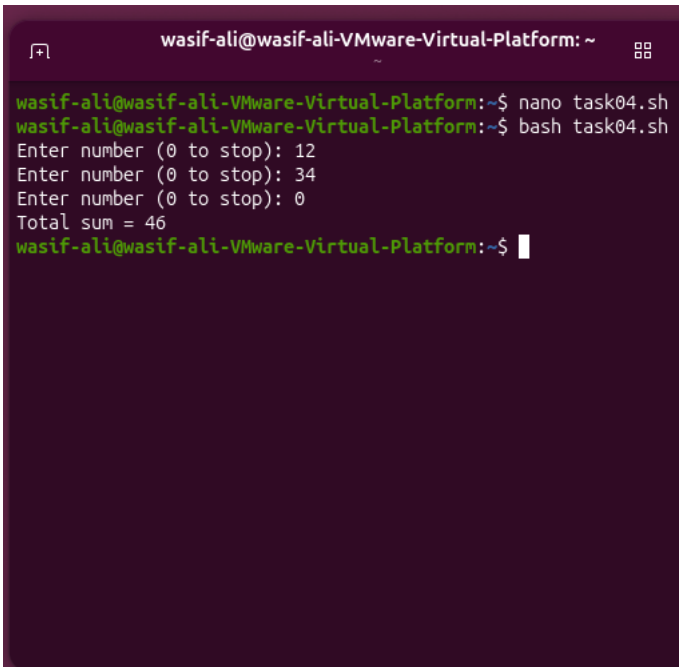

3. Produce a Bash script that uses a for loop to count and display the total number of .txt files in the current directory.

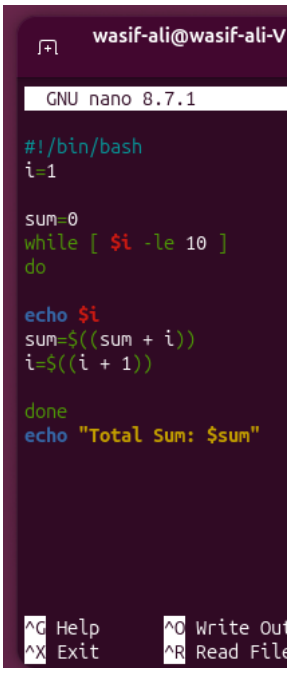

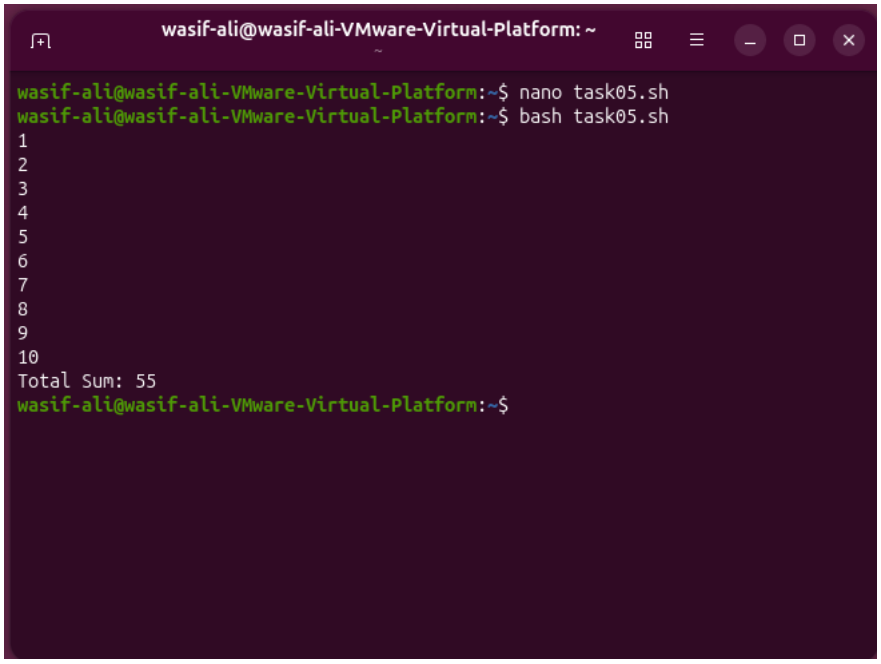

4. Solve a problem using a while loop that repeatedly takes numbers from the user, calculates their sum, and stops when the user enters 0.

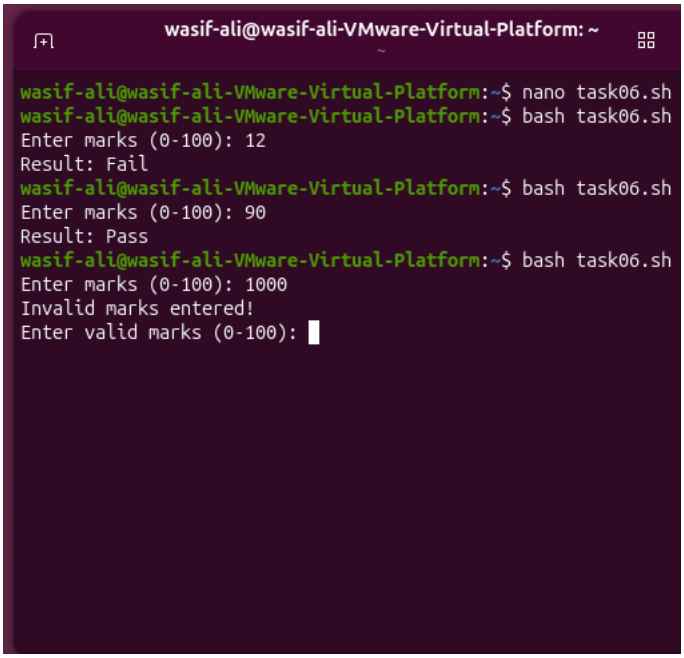

5. Prepare a Bash script using a while loop to display numbers from 1 to 10 and calculate their total sum using a counter variable.

6. Demonstrate input validation by repeatedly asking the user to enter marks between 0 and 100 until valid marks are entered, then display whether the student has passed or failed.

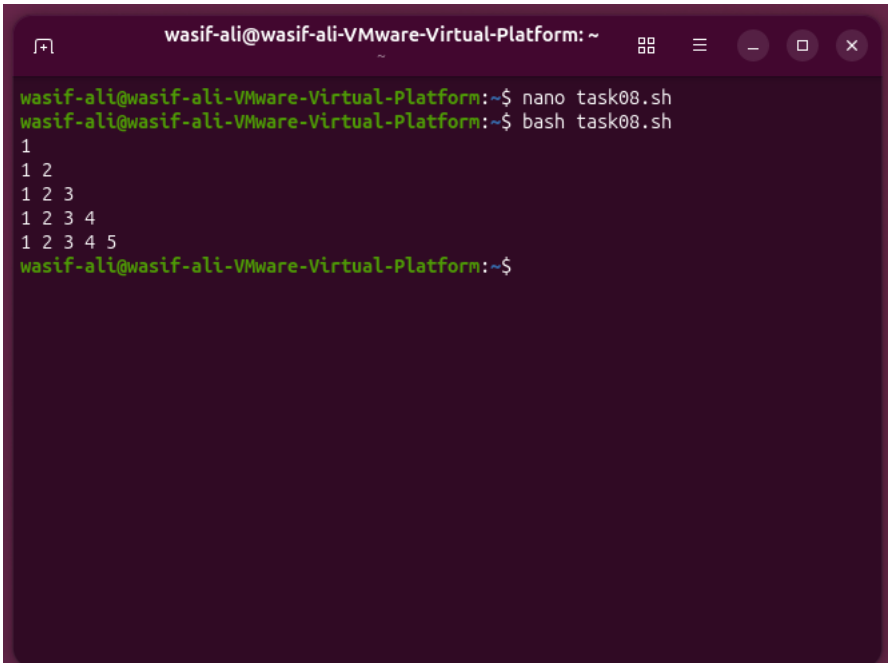

7. Develop a menu-driven Bash script using while and case that allows the user to display numbers from 1 to 10, calculate their sum, or exit the program.

N/A

8. Manipulate nested for loops to display the following number pattern:

```
1
1 2
1 2 3
1 2 3 4
1 2 3 4 5
```

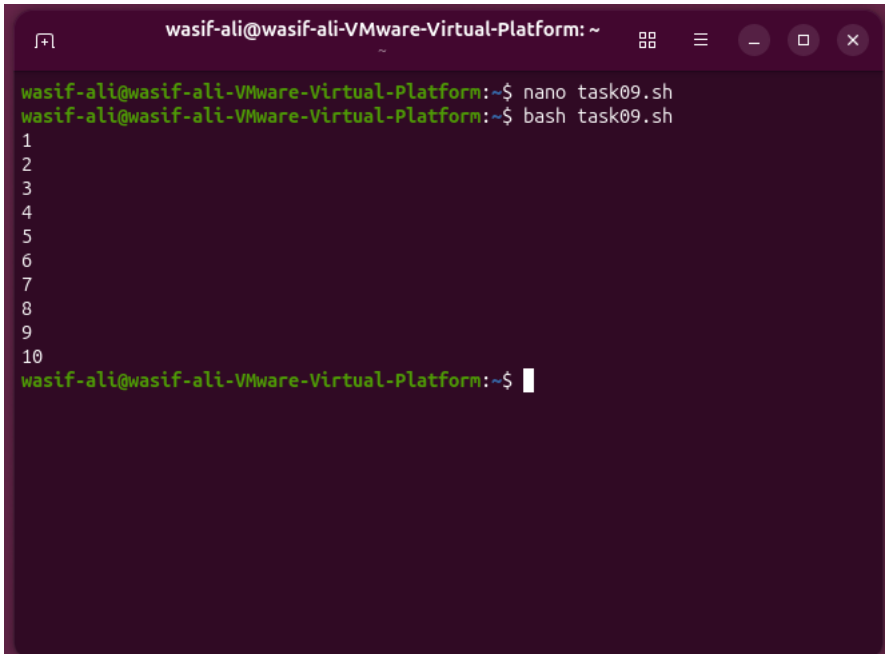

9. Compare the behavior of for and while loops by writing two Bash scripts that display numbers from 1 to 10 and produce the same output.

For Loop

While loop
